## AL-MAMOON DIAGNOSTIC MEDICAL CENTER

قسم الأشعة التشخيصية

Patient Name : عبدالله علي محمد خيران  
Age/Gender : 35 Y Male  
Bond No : 64433  
Referred By : د/عبد محمد الزكري  
Type : OP

Patient's Phone: 6701  
UHID. : F 578638  
Date : 23/02/2021 06:42 PM  
Print Date : 23/02/2021 06:57 PM

### abdominal u/s

#### Findings

##### Liver:

Normal PV, HV and biliary duct.

##### GB:

Normal wall thickness and no stone or mass, Normal CBD and biliary tree.

##### Pancreas:

Partially seen head and part of the body which is normal in size and parenchymal echogenicity.

##### Spleen:

Normal size and echogenicity with no focal lesion.

##### UB:

Nearly full, normal wall thickness and no stone or appreciable focal lesion.

#### Conclusion:

- Post Rt nephrectomy.
- Left kidney is border line small about 8 x 3.5 cm ,parenchymal thickness measuring between 7 and 9mm shows increase echopattern with decreased CMD denoting chronic nephropathy , micro gravels seen with mild irregular dilatation of calyces , left ureter is obscured by gas advice native CT to evaluate left ureter .
- Gasioeu bowel.
- Fatty liver with homogeneous texture , no focal lesion seen .
- Normal GB , spleen and visible parts of pancreas.
- Normal prostate
