Scrotal Doppler

Findings

- Both tests are normal in size (provides volume of RT= 18 cc, and LT= 18 cc) and normal echogenicity with no focal lesion or calcifications can be seen. Normal vascularity
- No hydrocele in either side,
- No varicocele in either side
- Normal scrotal wall and no detected inguinal lymph node or hernia in this time.

Conclusion:

- *Normal sonographically both testicle, no detected abnormality*
- *Simple cyst in the head of epididymi measuring 17.7 x 14 mm in Rt side and 4.5 x 2.7 mm in Lt side.*
- *No evident varicocele , maximum venous plexus diameter of 2.4 mm during valsalva maneuver and standing position.*
